

Interactive Furniture

From Because We Can
and Evil Mad Scientist Laboratories

Interactive furniture is everyday art that gently responds to motion in its vicinity. Graceful wooden forms with clean lines are complemented by the fluid motion of hundreds of light emitting diodes.

Far from being a disco floor, an interactive LED table is normally subtle and constant. In the dark, the table top faintly twinkles like the night sky. However, using a network of infrared sensors, the table can "see" what is above it and responds to motion and changes in ambient lightings. When you set a glass down on your table, a cascade of slow ripples begins at that point and gradually dissipates, inducing smaller ripples in neighboring areas of the table surface.

These interactive tables are designed and built as a collaboration between the artists at Because We Can and Evil Mad Scientist Laboratories. Prices for interactive coffee tables start at \$2500 and matching end tables are available starting at \$750. Choose from several existing designs in your choice of wood and LED colors, or work with us to design from scratch.

Configure your own interactive coffee table at
